Speaker:

Mr. CHEUNG Hau Wai, SBS
Executive Director,
Construction Industry Council

- Recipient, Outstanding BRE Alumni Award 2016
- Chairman, Zero Carbon Building
- Fellow, Hong Kong Institute of Surveyors
- Member, Town Planning Board
- Member, Royal Institution of Chartered Surveyors

About the Speaker :

Mr. Cheung is the Executive Director of the Construction Industry Council (CIC) and also the Chairman of the Zero Carbon Building (ZCB). He is a professional building surveyor, a Fellow of the Hong Kong Institute of Surveyors, a Member of the Royal Institution of Chartered Surveyors and a Member of the Town Planning Board.

Mr. Cheung has over 35 years of experience in building control and has a keen interest in building rejuvenation and green construction. He was the Director of the Buildings Department and had also held a number of positions in the then Buildings Ordinance Office, Building Development Department and Buildings and Lands Department.

On voluntary charitable work, Mr. Cheung joined the professional team led by Sr Professor Francis Lau Shiu Kwan in organising and providing building professional support for the reconstruction of essential facilities and buildings in the country side of Sichuan, which were damaged by the 2008 earthquake.

About the Lecture:

The construction industry has always been an important driver in the economic growth of Hong Kong. The industry has earned a reputation of its ability in constructing sophisticated skyscrapers and highly developed infrastructure network. This extraordinary feat would not have been possible without the dedicated teamwork and professionalism of Hong Kong's construction practitioners.

The Construction Industry Council (CIC), since its establishment in February 2007, is dedicated to sustaining the continued growth and development of Hong Kong's construction industry. As CIC is celebrating its tenth anniversary, the lecture will report on the initiatives which the Council will take to enhance the intake and training of construction personnel, site health and safety, productivity and sustainability. The initiatives include integrating training with the education system, encouraging interdisciplinary collaboration, riding on the green building movement, encouraging technology and innovation, and the use of Building Information Modeling.
