

Subject Description Form

Subject Code	BRE302
Subject Title	Structure II
Credit Value	3
Level	3
Pre-requisite / Co-requisite/ Exclusion	AMA290 & BRE204, or their equivalents
Objectives	Consolidate the knowledge gained in Structure I and to extend this knowledge to include structural principles as related to design/construction of structural elements in building works. At the end of this subject, the student is expected to be able to design building structural elements and appreciate the design of temporary steelworks.
Intended Learning Outcomes	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> a) Appreciate the structural design principles in limit state design and their applications to the design of permanent building structures according to the “Code of Practice for the Structural Use of Steel 2005” and the “Code of Practice for Structural Use of Concrete 2004 (Second Edition)”, published by the Buildings Department of Hong Kong SAR. b) Design and analyze the basic types of steel structural members and connections. c) Design and analyze the basic types of Reinforced Concrete (RC) members. d) Appreciate the design of temporary steelworks/RC Works in building construction, tower crane erection in particular. e) Improve on problem-solving skills, communication skills in written format, teamwork spirit in professional context.
Subject Synopsis/ Indicative Syllabus	<p><i>Design Concept</i></p> <p>Limit states design: ultimate limit states and serviceability limit states, load combination.</p> <p><i>Structural principles applied to the use of structural steel design</i></p> <p>Structural steel design to the <i>Code of Practice for the Structural Use of Steel 2005</i>. Tension members, beams (laterally restrained and unrestrained), columns, beam-columns, welded and bolted connections.</p> <p><i>Structural principles applied to the use of reinforced concrete design</i></p> <p>Reinforced concrete design to the <i>Code of Practice for Structural Use of Concrete 2004</i>: singly and doubly reinforced concrete beams, shear reinforcement, simply supported slabs, one-way continuous slab, compression members under axial load and moment, average and local bond stresses.</p> <p><i>Temporary works engineering</i></p> <p>Basic principles, Codes, Standards and Regulations related to the design and erection of temporary steelworks.</p>

Teaching/Learning Methodology	<p>Interactive lectures will enable students to understand the basic design concepts and learn how to design basic structural members with due consideration to their service conditions;</p> <p>Tutorial will enable students to consolidate the structural design concept through design problem-solving assignments and discussions;</p> <p>Laboratory works will enable students to identify, through a loading test, the structural behavior of a full-scale simply supported steel beam subjected to bending;</p> <p>Demonstrations at the Industrial Center will enable students to appreciate the quality control and nondestructive tests on the structural steel welding.</p>																																																															
Assessment Methods in Alignment with Intended Learning Outcomes	<table border="1" data-bbox="443 562 1471 1003"> <thead> <tr> <th rowspan="2">Specific assessment methods/tasks</th> <th rowspan="2">% weighting</th> <th colspan="6">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> <th></th> </tr> </thead> <tbody> <tr> <td>1.
