	4 years	
	Subject Description Form	
BRE666	Numerical Methods for Engineer	34-36
BRE671	Attendance in research seminars/workshops/conferences	37
BRE672	Attendance in research seminars/workshops/conferences	38
BRE673	Attendance in research seminars/workshops/conferences	39
BRE674	Attendance in research seminars/workshops/conferences	40
BRE675	Practicum	41
BRE676	Practicum	42
CE603	Research Frontiers in Construction and Environment	43-44
HTI6081	Ethics: Research, Professional & Personal Perspectives	45-47
LSGI620	Research Methods	48-50

**DEPARTMENT OF BUILDING & REAL ESTATE
PROGRAMME DOCUMENT FOR RESEARCH DEGREE PROGRAMMES**

(for research students admitted in 2014/15 or after)

Programme Title :	<p>Doctor of Philosophy (PhD) in Information and Construction Technology</p> <p>Doctor of Philosophy (PhD) in Construction and Real Estate Economics</p> <p>Doctor of Philosophy (PhD) in Construction and Real Estate Law & Policy</p> <p>Doctor of Philosophy (PhD) in Construction and Real Estate Management</p> <p>Master of Philosophy (MPhil) in Information and Construction Technology</p> <p>Master of Philosophy (MPhil) in Construction and Real Estate Economics</p> <p>Master of Philosophy (MPhil) in Construction and Real Estate Law & Policy</p> <p>Master of Philosophy (MPhil) in Construction and Real Estate Management</p>
Programme offering department :	Department of Building and Real Estate
Award :	<p>Doctor of Philosophy (PhD)</p> <p>Master of Philosophy (MPhil)</p>
Normal length of programme	<p>MPhil : 2 years (full-time)</p> <p>PhD : 3 years (full-time)</p> <p style="padding-left: 40px;">4 years (full-time)</p> <p><i>The normal study period for part-time mode of study will be twice the length of the full-time mode.</i></p>
Programme Structure	2-year MPhil : 9 credits (<i>1 credit from HTI6081 + 2 credits from attending seminars + 6 credits from other subjects under the prescribed curriculum</i>) <u>plus</u> a MPhil thesis

	<p>3-year PhD : 15 credits (<i>1 credit from HTI6081 + 3 credits from attending seminars + 2 credits from practicum + 9 credits from other subjects under the prescribed curriculum</i>) <u>plus</u> a PhD thesis</p> <p>4-year PhD : 22 credits (<i>1 credit from HTI6081 + 4 credits from attending seminars + 2 credits from practicum + 15 credits from other subjects of which no more than 6 credits on Guided-study subjects under the prescribed curriculum</i>) <u>plus</u> a PhD thesis</p> <p>HTI6081 is a compulsory one-credit subject entitled “<i>Ethics : Research, Professional & Personal Perspectives</i>”.</p> <p>Students are recommended to complete one credit for attending seminars per year (for full-time students) or per two years (for part-time students) to fulfil the above-mentioned requirement, with an overall assessment grade of Pass and Fail. However, as deemed appropriate by the Chief Supervisor, they are allowed to complete at most two credits per year (for full-time students) or per two years (for part-time students) to fulfil the research seminar credit requirement.</p> <p>For Practicums, students are allowed to complete these two credits any time before they graduate. They can choose to complete these two credits in two different semesters or within the same semester, subject to the approval of the Chief Supervisor. Stipend recipients are allowed to fulfill part of their departmental training requirement through the completion of these compulsory training credits. For students who are required to undertake teaching supporting activities, they should be required to complete the training programmes organised by the EDC and ELC before the commencement of any teaching supporting activities.</p> <p>Students are not allowed to take research postgraduate subjects provided by other departments at PolyU or other universities as elective subjects.</p>
Credit Transfer	Credits which have already been used to contribute to an

	<p>award should not be “transferred” to contribute to another award with the following exceptions :</p> <p>3-year PhD students will be allowed to apply to transfer one credit from their previous studies in HTI6081 and one credit from their previous attendance in seminars.</p>
--	--

This Programme Document is subject to review and changes which BRE can decide to make from time to time. Students will be informed of the changes as and when appropriate.

This Document should be read together with the “Regulations and Administrative Procedures for the Degrees of MPhil and PhD” and the “Research Student Handbook”.

Mapping of Intended Learning Outcome of Individual Research Degree Programme against the University Overarching Aims of Research Degree Programmes

Programme Title: MPhil in Information and Construction Technology

Hosted by: Department of Building and Real Estate

University Overarching Aims of Research Degree Programmes	Intended Learning Outcomes of Individual Research Degree Programme *
<p>The research degree programmes are designed in such a way to enable the student to:</p> <p>a. acquire competence in research methods and scholarship; and</p> <p>b. display sustained independent effort and independent original thought.</p> <p>The PhD programmes should target to produce academics or industrial R & D professionals.</p>	<p>On the completion of the program, students will be able to:</p> <ol style="list-style-type: none"> 1. Develop a systematical understanding of advanced knowledge in information and construction technology; 2. Develop scientific literacy, including critical thinking, analytical skills, and sound research methods; 3. Understand the importance and strategic values of their research; 4. Develop effective communication skills for both academic and non-academic communities

Coursework Requirement for Outcome-based Programmes

Subject Code	Subject Title	Credit Value	Subject Type
LSGI620	Research Methods	3	Faculty Compulsory
CE603	Research Frontier in Construction and Environment	3	Faculty Compulsory
HTI6081	Ethics: Research, Professional and Personal Perspectives	1	University Compulsory
BRE671	Attendance in research seminars/workshops/conferences	1	University Compulsory
BRE672	Attendance in research seminars/workshops/conferences	1	University Compulsory

Subject #6 – BRE675 & BRE676 - Practicum (Total 2 credits)

Curriculum Map for Individual Research Degree Programme

Programme Title: PhD in Construction and Real Estate Law and Policy (4 years)

Hosted by: BRE

Please put a “√” in the relevant box where the subject helps to fulfill the specific programme outcome.

Programme Outcomes	Subject #1	Subject #2	Subject #3	Subject #4	Subject #5	Subject #6	Subject #7	Subject #8	Thesis
1. Develop a systematical understanding of advanced knowledge in construction and real estate law and policy;	√		√				√	√	√
2. Develop scientific literacy, including critical thinking, analytical skills, and sound research methods;	√	√	√				√	√	√
3. Develop the ability to solve challenging problems related to construction and real estate law and policy;	√		√				√	√	√
4. Understand the importance and strategic values of their research;		√	√	√	√	√			√
5. Develop effective communication skills for both academic and non-academic communities		√	√	√	√	√			√

Subject #1 – BRE666 Numerical Methods for Engineers (3 credits)

Subject #2 – LSGI620 Research Methods (3 credits)

Subject #3 – CE603 Research Frontier in Construction and Environment (3 credits)

Subject #4 – HTI6081 Ethics: Research, Professional & Personal Perspectives (1 credit)

Subject #5 – BRE671, BRE672, BRE673 & BRE674 - Attendance in research seminars/workshops/conferences (Total 4 credits)

Subject #6 – BRE675 & BRE676 - Practicum (Total 2 credits)

Subject #7 & #8 – BRE6801 & BRE6805 – Guided study (total 6 credits)

Mapping of Intended Learning Outcome of Individual Research Degree Programme against the University Overarching Aims of Research Degree Programmes

Programme Title: PhD in Construction and Real Estate Management

Hosted by: Department of Building and Real Estate

University Overarching Aims of Research Degree Programmes	Intended Learning Outcomes of Individual Research Degree Programme *
<p>The research degree programmes are designed in such a way to enable the student to:</p> <ul style="list-style-type: none"> a. acquire competence in research methods and scholarship; and b. display sustained independent effort and independent original thought. <p>The PhD programmes should target to produce academics or industrial R & D professionals.</p>	<p>On the completion of the program, students will be able to:</p> <ul style="list-style-type: none"> 1. Develop a systematical understanding of advanced knowledge in construction and real estate management; 2. Develop scientific literacy, including critical thinking, analytical skills, and sound research methods; 3. Develop the ability to solve challenging problems related to construction and real estate management; 4. Understand the importance and strategic values of their research; 5. Develop effective communication skills for both academic and non-academic communities

The Hong Kong Polytechnic University

Subject Description Form

Please read the notes at the end of the table carefully before completing the form.

Subject Code	BRE666
Subject Title	Numerical Methods for Engineers
Credit Value	3
Level	6
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	This subject aims to provide students the basic concepts, methodologies and skills of solving engineering problems numerically with computers;
Intended Learning Outcomes (Note 1)	<p>Upon completion of the subject, students will be able to:</p> <ol style="list-style-type: none"> find the root of an equation by bisection method and Newton-Raphson method; solve algebraic equations by Gauss elimination, LU decomposition and matrix inversion, Gauss-Seidel iteration method; apply least-squares regression and interpolating polynomials for curve-fitting and plotting experimental data; apply Newton-Cotes integration formulas for numerical integration and finite difference method for numerical differentiation; apply finite difference methods for solving ordinary and partial differential equations, including Euler's method, Runge-Kutta method, and Crank-Nicolson method. apply statistical methods for data analysis
Subject Synopsis/ Indicative Syllabus (Note 2)	<p>Introduction to Numerical and Statistical Methods</p> <p>Roots of non-linear equations – Bracketing method. Bisection method. Open methods. Newton-Raphson method. Secant method. Brent's method.</p> <p>Linear algebraic equations – Gauss elimination. LU Decomposition and Matrix Inversion. Gauss-seidel iteration.</p> <p>Curve fitting and interpolating – Least square regression. Linear regression. Polynomial regression. Nonlinear regression. Interpolation. Lagrange interpolating polynomials. Newton's divided-difference interpolating polynomials. Spline interpolation.</p> <p>Numerical integration and differentiation – Newton-Cotes integration formulas. Trapezoidal rule. Simpson's rules. Romberg integration. Taylor's series expansion. Richardson extrapolation.</p> <p>Differential equations – Euler's method. Runge-Kutta method. Systems of equations. General methods for boundary-value problems. The shooting method. Finite difference method; Explicit methods. Crank-Nicolson method. Alternating-direction implicit (ADI) scheme.</p> <p>Statistical methods for Building Engineers, Surveyors and Project Managers - Elementary measurements of central tendency and dispersions; Probability and</p>

	<p>probability distributions; Collection of data, sampling, sampling distributions Estimation and hypothesis testing; Goodness of fit and testing of independence Simple and multiple regression;</p> <p>Software application: SPSS</p>																																								
<p>Teaching/Learning Methodology (Note 3)</p>	<p>Teaching periods will adopt a range of methods which include lectures and tutorials. The lectures aim to provide the students fundamental concepts and principles of numerical methods. Tutorial will be used to develop students' problem solving skills. Where appropriate, the use of computer assisted learning techniques will be employed.</p> <p>The intention is to create an environment that encourages active learning. Students will be encouraged to apply the numerical techniques to solve practical engineering problems.</p>																																								
<p>Assessment Methods in Alignment with Intended Learning Outcomes (Note 4)</p>	<table border="1"> <thead> <tr> <th rowspan="2">Specific assessment methods/tasks</th> <th rowspan="2">% weighting</th> <th colspan="5">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> </tr> </thead> <tbody> <tr> <td>1. Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon completion of the subject. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/ Indicative Syllabus

The syllabus should adequately address the intended learning outcomes. At the same time over-crowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method purports to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.

The Hong Kong Polytechnic University

Subject Description Form

Subject Code	BRE671
Subject Title	Attendance in research seminars/workshops/conferences
Credit Value	1
Level	6
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	To enhance the exposure and horizon of the students in research and other related areas.
Intended Learning Outcomes	Understand the importance and strategic value of research and development. Develop effective communication skills for both academic and non-academic communities.
Subject Synopsis/ Indicative Syllabus	<p>Full-time students are required to attend at least 10 research seminars per academic year, in addition to workshops/conferences, and to submit a report, to the Chief Supervisor, of no less than 1,500 words (excluding references) on one of the attended seminars every year.</p> <p>Part-time students are required to attend at least 10 research seminars per two academic years, in addition to workshops/conferences, and to submit a report, to the Chief Supervisor, of no less than 1,500 words (excluding references) on one of the attended seminars once every two academic years.</p> <p>The research seminars may or may not be organised by BRE Department and are expected to last not less than an hour each. The topic of the seminar reported on should not be related directly to the thesis title of the student.</p>
Assessment Methods	<p>Chief Supervisors are required to assess the report (with a pass or failure grade). Students who failed to submit a report to the satisfaction of their Chief Supervisor are required to make a re-submission until a pass grade is obtained. The Chief Supervisor has to pass the record of the seminars attended by their students and the report with a pass grade to the Research Office for custody at the end of each academic year.</p> <p>Students are recommended to complete one credit for attending seminars per year (for full-time students) or per two years (for part-time students) to fulfil the above-mentioned requirement, with an overall assessment grade of Pass and Fail. However, as deemed appropriate by the Chief Supervisor, they are allowed to complete at most two credits per year (for full-time students) or per two years (for part-time students) to fulfil the research seminar credit requirement.</p>

The Hong Kong Polytechnic University

Subject Description Form

Please read the notes at the end of the table carefully before completing the form.

Subject Code	CE603
Subject Title	Research Frontiers in Construction and Environment
Credit Value	3
Level	6
Pre-requisite / Co-requisite/ Exclusion	Nil
Objectives	<p>This subject is intended to provide students with:</p> <ol style="list-style-type: none"> 1. a good understanding of the research foci and achievements of the Faculty and its constituent departments 2. a broad perspective of key research issues in the broad field of construction and environment 3. general knowledge of the current status and future challenges of key research areas of FCE and their relationship with the student's own research 4. an exposure to different research cultures, techniques and approaches employed in different research areas and how they may be exploited in the student's own work 5. opportunities to interact with leading scholars from the four constituent departments of FCE 6. opportunities to interact with fellow research students to lay the groundwork for future collaborations
Intended Learning Outcomes (Note 1)	<p>Upon completion of the subject, students will possess:</p> <ol style="list-style-type: none"> 1. a broad perspective of key research issues in the field of construction and environment; 2. a good knowledge of the wide range of expertise available in the Faculty; 3. an understanding of the different approaches employed in different research areas; and 4. an awareness of opportunities for research collaborations in the Faculty.
Subject Synopsis/ Indicative Syllabus (Note 2)	<p>Overview of Research in FCE and selected topics in the field of construction and environment which may include: Urban Planning and Management; Construction Management; Construction Technology; Building Environmental Performance; Energy Efficient Building Technologies; Renewable Energy Applications; Transportation Engineering; Structural Engineering; Environmental Science and Engineering; Geotechnical Engineering; Hydraulic and Coastal Engineering; Remote Sensing and Geographic Information Systems; and Modern Positioning Technology.</p>
Teaching/Learning Methodology (Note 3)	<p>A group of academic staff from the four constituent departments of FCE will share the teaching of the subject. The lecturers will all be active researchers in their fields and they will each provide a critical exposition of the current status and future challenges in their own/related research areas. Ample opportunities will be provided for classroom discussions.</p>

Assessment Methods in Alignment with Intended Learning Outcomes (Note 4)	Specific assessment methods/tasks	% weighting	Intended subject learning outcomes to be assessed (Please tick as appropriate)					
			a	b	c	d		
	1. In-class test	60%	✓	✓	✓	✓		
	2. Project report	40%	✓	✓	✓	✓		
	Total	100 %						
	Explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes: In-class tests can evaluate students' understanding gained at each lecture efficiently and effectively.							
Student Study Effort Expected	Class contact:							
	▪ Lecture		39 Hrs.					
	▪		Hrs.					
	Other student study effort:							
	▪ Reading of reference materials		24 Hrs.					
	▪ Writing project report		60 Hrs.					
	Total student study effort		123 Hrs.					
Reading List and References	To be provided by individual teaching staff.							

Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon completion of the subject. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/ Indicative Syllabus

The syllabus should adequately address the intended learning outcomes. At the same time over-crowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Subject Code	HTI6081
Subject Title	Ethics: Research, Professional & Personal Perspectives
Credit Value	1
Level	3
Pre-requisite / Co-requisite/ Exclusion	None
Objectives	<ul style="list-style-type: none"> • To instill in students a deep appreciation of ethical guidelines and codes of conduct that they can apply in their research studies at PolyU and in their future professional and personal lives.
Intended Learning Outcomes (Note 1)	<p>On successful completion of this subject, students will be able to:</p> <ol style="list-style-type: none"> 1. Demonstrate knowledge and understanding of the need for ethical behaviour and guiding codes of ethics in research and the professions. 2. Understand, discuss and apply ethical principles and codes across a range of disciplines and scenarios 3. Demonstrate awareness of current ethical issues and problems in relation to their own discipline and research area 4. Critically analyze and discuss scenarios cases of possible or actual ethical misconduct 5. Discuss how the guiding principles of ethics in research extend and apply to business, professional and personal codes of conduct and why this important to integrity and the well being of business, the professions and our community. 6. Show a fundamental understanding of the issues of copyright, plagiarism and proper citation, and be able to apply this in their own work.
Subject Synopsis/ Indicative Syllabus (Note 2)	<ul style="list-style-type: none"> • The need for ethics training and the meaning of ethical behaviour in research: case studies, disasters and learning by the mistakes of others • Philosophy and codes of ethics and their origins • Culture, religion and the law – how these relate to ethical codes of conduct • Obtaining ethical approval for a research project: procedures and processes • Ethics in life science, humanities, education, business and industry: common issues, guiding principles, discipline specific scenarios • Ethics and human behavior: individual, professional and societal responsibilities • Recent ethical issues affecting Hong Kong and society in general • Ethical use of information in thesis writing: understanding copyright, plagiarism and proper citation

Teaching/Learning Methodology (Note 3)	Lecture/seminar/workshop

Note 1: Intended Learning Outcomes

Intended learning outcomes should state what students should be able to do or attain upon completion of the subject. Subject outcomes are expected to contribute to the attainment of the overall programme outcomes.

Note 2: Subject Synopsis/ Indicative Syllabus

The syllabus should adequately address the intended learning outcomes. At the same time over-crowding of the syllabus should be avoided.

Note 3: Teaching/Learning Methodology

This section should include a brief description of the teaching and learning methods to be employed to facilitate learning, and a justification of how the methods are aligned with the intended learning outcomes of the subject.

Note 4: Assessment Method

This section should include the assessment method(s) to be used and its relative weighting, and indicate which of the subject intended learning outcomes that each method purports to assess. It should also provide a brief explanation of the appropriateness of the assessment methods in assessing the intended learning outcomes.

The Hong Kong Polytechnic University

Subject Description Form

Please read the notes at the end of the table carefully before completing the form.

Subject Code	LSGI620
Subject Title	Research Methods
Credit Value	3
Level	6
Pre-requisite / Co-requisite/ Exclusion	Basic knowledge on Probability
Objectives	<ul style="list-style-type: none"> • To provide an understanding of the fundamental principles and techniques for scientific research. • To enable students to properly identify and apply appropriate research methodologies to their research problems. • To enable students become proficient in data analysis, statistical tests and writing for scientific research.
Intended Learning Outcomes (Note 1)	<p>Upon completion of the subject, students will be able to:</p> <ul style="list-style-type: none"> • Understand research theory, research basics and scientific thinking. • Understand a range of research methods for exploratory data analysis t and modelling techniques. • Master techniques for thesis/paper/proposal writing and scientific presentation. • Appreciate the limitation of the learned theory/ methods/techniques. • Apply the learned theory/ methods/techniques to their research projects.
Subject Synopsis/ Indicative Syllabus (Note 2)	<p>Research theory Research basics. Research theory. Research method. Research ethics. Research attitude. Research values. Research wisdom. PhD Research.</p> <p>Research cycle: from broad topic to hypothesis Selection of research topic. Understanding and interpretation of the literature. Recognition of new questions. Research hypothesis. Making hypothesis. Design of experiments. Analysis and interpretation of the results. Presentation of the results.</p> <p>Research design Components of experimental design. Guidelines for experiment design. Cause-effect analysis. Ideas to learn from classic scientific experiments. Consideration of unexplained variations. Sample size. Sampling strategy. Significance.</p>

	<p>Research thinking Components and ways of creative thinking. Ways of thinking leading to great innovation. Ways of thinking by great scientists and inventors. General scientific principles to guide thinking. Ways to improve creativity. Creative block.</p> <p>Research writing/presentation Ways of writing. Type of proposals and proposal writing. Construction of title/heading and logic flow. Techniques for writing abstract, introduction, body, discussion and conclusion. Guidelines for organizing citations and references. Ethics issue. Common mistakes in presentation. Guidelines for good presentation.</p> <p>Statistical analysis and modelling Linear regression. Multiple linear regression. Geographical weighted regression. Robust regression. Outliers detection. Association rules mining. Clustering. Time series analysis. Big data analysis.</p> <p>Result interpretation: Statistical significance tests Steps in Testing for Statistical Significance. Selection of a probability of error level (alpha level). Various tests (Chi square test , T-Test, U-test, Z-test) . Interpretation of test results.</p>																																														
<p>Teaching/Learning Methodology <i>(Note 3)</i></p>	<p>Lectures and class discussions are followed by problem based tutorial assignments that are used to practice of theory and methods learnt during lectures in solving student’s discipline oriented problems.</p>																																														
<p>Assessment Methods in Alignment with Intended Learning Outcomes <i>(Note 4)</i></p>	<table border="1" data-bbox="553 1161 1435 1604"> <thead> <tr> <th rowspan="2">Specific assessment methods/tasks</th> <th rowspan="2">% weighting</th> <th colspan="6">Intended subject learning outcomes to be assessed (Please tick as appropriate)</th> </tr> <tr> <th>a</th> <th>b</th> <th>c</th> <th>d</th> <th>e</th> <th></th> </tr> </thead> <tbody> <tr> <td>1.
